MECHANICAL ENGINEERING

Two undergraduate programs are offered within the Department of Mechanical Engineering (https://www.uakron.edu/engineering/ME), leading to the Bachelor of Science in Mechanical Engineering and the Bachelor of Science in Aerospace Systems Engineering. The department also offers graduate programs leading to a Master of Science in Mechanical Engineering, and an interdisciplinary Doctor of Philosophy in Engineering.

4600: Mechanical Engineering

Mechanical engineers design and analyze physical systems and are employed in a variety of industries in different capacities. Mechanical engineers play important roles in many types of companies, including automotive, petroleum, energy generation and conversion, aerospace, tire, consulting, chemical, electronic, and manufacturing.

The Mechanical Engineering curriculum at The University of Akron is designed to give the student knowledge of fundamental principles of the 1. thermal/fluids stem, 2. structures and motion stem, and 3. controls stem of mechanical engineering, as well as the application of these principles to pertinent problems.

A significant measure of the mechanical engineering education is the degree to which it has prepared the graduate to pursue a productive engineering career that is characterized by continued professional growth.

The Mechanical Engineering program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org). The program educational objectives (PEOs) for the Mechanical Engineering program are that, within a few years after graduation, our Mechanical Engineering graduates:

- Practice the mechanical engineering discipline successfully within community accepted standards
- Acquire teamwork and communications skills to develop a successful career in mechanical engineering
- Fulfill professional and ethical responsibilities in the practice of mechanical engineering, including social, environmental and economic considerations
- Engage in professional service, such as participation in professional society and community service
- Engage in life-long learning activities, such as graduate studies or professional workshops
- Develop a professional career in the prevailing market that meets personal goals, objectives and desires

To meet those program educational objectives as well as the curricular requirements specified by the American Society of Mechanical Engineers (ASME) for accreditation, the Mechanical Engineering program identifies student outcomes, which are what students are expected to achieve by the time of graduation. They are:

- An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
- An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
- An ability to communicate effectively with a range of audiences
- An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
- An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
- An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
- An ability to acquire and apply new knowledge as needed, using appropriate learning strategies

4900: Aerospace Systems Engineering

The Bachelor of Science in Aerospace Systems Engineering degree program is intended to produce engineers who possess both a broad, interdisciplinary knowledge of aerospace engineering fundamentals and who will be able to move quickly into the role of project managers, the precursor position to program managers and ultimately, senior managers. These engineers can lead multidisciplinary teams and bring about the integration of components in a variety of systems. The program includes basic engineering and aerospace courses and will also include specific non-engineering courses, selected to meet the goal of developing future senior technical leaders for our aerospace industries. The program features a mandatory co-op component that begins following the sophomore year. The co-op requirement is expected to fill out the student’s technical background as well as provide a basis for broad personal growth that is part of the aim of the General Education requirement. Three fewer hours of General Education courses are required for Aerospace Systems Engineering due to the mandatory co-op.

The Aerospace Systems Engineering program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org). The program educational objectives (PEOs) for the Aerospace Systems Engineering program are that, within a few years after graduation, our Aerospace Systems Engineering graduates:

- Practice the aerospace systems engineering disciplines successfully within community accepted standards
- Acquire teamwork and communications skills to develop a successful career in aerospace systems engineering
- Fulfill professional and ethical responsibilities in the practice of aerospace systems engineering, including social, environmental, and economical considerations
- Engage in professional service, such as participation in professional society and community service
- Engage in life-long learning activities, such as graduate studies or professional workshops
- Develop a professional career in the prevailing market that meets personal goals, objectives and desires

To meet those program educational objectives as well as the curricular requirements specified by the American Institute of Aeronautics and Astronautics, the Aerospace Systems Engineering program identifies student outcomes, which are what students to achieve by the time of graduation. They are:
• an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
• an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
• an ability to communicate effectively with a range of audiences
• an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
• an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
• an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
• an ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Information specific to the available program options in mechanical engineering and aerospace systems engineering is available:

• Aerospace Systems Engineering, BS (https://bulletin.uakron.edu/undergraduate/colleges-programs/engineering/mechanical-engineering/aerospace-systems-engineering-co-op-bs)
• Mechanical Engineering, Co-op Option, BS (https://bulletin.uakron.edu/undergraduate/colleges-programs/engineering/mechanical-engineering/mechanical-engineering-co-op-bs)
• Mechanical Engineering, BS (https://bulletin.uakron.edu/undergraduate/colleges-programs/engineering/mechanical-engineering/mechanical-engineering-bi)
4600:402 Senior Seminar (1 Credit)
Prerequisite: Admission to the College of Engineering. Corequisites: 4600:400, 4600:441, 4600:460 and [4600:401 or 4600:461 or 4700:499]. Students need further education in ethics, codes and standards, intellectual property, product liability, safety issues, technical writing, diversity, and job opportunities.

4600:410 Heating & Air Conditioning (3 Credits)
Prerequisites: 4600:301 or permission. Corequisite: 4600:315 or permission. Thermodynamics of gas mixtures. Design and selection of air conditioning equipment. Control of gas mixtures, heating, cooling and humidity.

4600:411 Compressible Fluid Mechanics (3 Credits)
Prerequisites: 4600:301, 4600:311 and admission to the College of Engineering. Subsonic and supersonic flow in nozzles, diffusers and ducts. One-dimensional reactive gas dynamics. Prandtl-Myer theory. Applications to design and analysis of compressors, turbines and propulsion devices.

4600:412 Fundamentals of Flight (3 Credits)
Prerequisites: 4600:311 and admission to the College of Engineering. Introduction to basic aerodynamics, airplane performance, stability and control, aeronautics and propulsion. Design considerations are emphasized.

4600:413 Introduction to Aerodynamics (3 Credits)
Prerequisites: 4600:311 and admission to the College of Engineering. Introduction of aerodynamic concepts; includes conformal transformations, theory of thin airfoils, two-dimensional airfoil theory, wings of finite span, lifting line theories, lumped vortex, vortex lattice, and panel methods.

4600:414 Introduction to Aerospace Propulsion (3 Credits)
Prerequisites: 4600:311 and admission to the College of Engineering. Introduction to propulsion systems currently used in aerospace fields; propulsion principles for turbojets, turbofans, ramjets, chemical rockets, and electrical rocket propulsion.

4600:415 Energy Conversion (3 Credits)
Prerequisites: 4600:301 or permission. Corequisite: 4600:315 or permission. Topics from fields of internal combustion engines, cycle analysis, modern conversion devices.

4600:416 Heat Transfer Processes (3 Credits)
Prerequisite: 4600:315 or permission. Analysis, design of extended surfaces. Natural convection and mixed convection, combined modes of heat transfer and heat transfer with phase changes.

4600:420 Introduction to Finite Element Method (3 Credits)

4600:422 Experimental Stress Analysis I (3 Credits)
Prerequisite: 4600:336 or permission. Experimental methods of determining stress or strain: brittle lacquer, strain gages, photoelasticity, full field techniques.

4600:430 Machine Dynamics (3 Credits)
Prerequisite: 4600:321 or permission. Static and dynamic forces in machines, products of inertia, dynamic equivalence, flywheels. Balancing of rotating, reciprocating, cyclic plane motion. Computer simulation of transient mechanism dynamics, other topics in advanced dynamics.

4600:431 Fundamentals of Mechanical Vibrations (3 Credits)
Prerequisites: 3450:335, 4600:203 and admission to the College of Engineering or permission. Undamped and forced vibrations of systems having one or two degrees of freedom.

4600:432 Vehicle Dynamics (3 Credits)

4600:440 System Dynamics & Control (4 Credits)
See department for course description.

4600:441 Control Systems Design (3 Credits)
Prerequisites: 4600:340 and admission to the College of Engineering or permission. Methods of feedback control design such as minimized error, root-locus, frequency domain. Compensation techniques. Multivariable and nonlinear design methods and computer-aided control design.

4600:442 Industrial Automatic Control (3 Credits)
Prerequisite: 4600:441 or permission. Operation of basic control mechanisms. Study of mechanical, hydraulic, pneumatic, fluidic control systems, including application areas. Tuning of control devices for optimum performance of system. Case studies on control applications from industry, e.g. boilers, furnaces, process heaters.

4600:443 Optimization Methods in Mechanical Engineering (3 Credits)
Prerequisite: 4600:360 or permission. Development and method of solution of optimization problems in mechanical engineering. The use of dynamic programming and operational research methods for optimization including computer utilization and applications.

4600:444 Robot Design, Control & Application (3 Credits)
Prerequisites: [4600:321 or 4600:441] or permission. Robot design and control. Kinematic transformations, velocities and accelerations, path trajectories and dynamics, control and sensing in robotics. The automated factory with robot applications.

4600:450 Introduction to Computational Fluid Flow & Convection (3 Credits)
Prerequisites: 4600:315 or permission, 4600:360 or permission. Numerical modeling of fluid/thermal systems; numerical solution of the momentum and thermal boundary layer equations; flow simulation using advanced heat transfer/flow/thermal systems. Design process. Creativity and inventiveness. Tools of decision making, engineering economics, reliability, optimization. Case studies.

4600:460 Concepts of Design (3 Credits)
Prerequisite: 4600:337 and admission to the College of Engineering. Design process. Creativity and inventiveness. Tools of decision making, engineering economics, reliability, optimization. Case studies.

4600:461 ME Senior Design Project I (2 Credits)
Prerequisite: Admission to the College of Engineering. Corequisites: 4600:400, 4600:441 and 4600:460. Detailed senior design project. Design, feasibility, and cost analysis.

Gen Ed: Tier 3 - Complex Systems

4600:462 Pressure Vessel Design (3 Credits)
Prerequisite: 4600:336 or permission. Introduction to modern pressure vessel technology. Topics include basic structural considerations, materials and their environment and design-construction features.

4600:463 Computer Aided Design & Manufacturing (3 Credits)
Prerequisites: 4600:165 or permission, 4600:360 or permission. The use of computer systems to assist in the creation, modification, analysis, or optimization of engineering designs, and to plan, manage, and control manufacturing plants.
4600:471 ME Senior Design Project II (2 Credits)
Prerequisites: 4600:461 and admission to the College of Engineering.
Detailed senior design project. Final design and implementation.

4600:483 Measurements Laboratory (2 Credits)
Prerequisites: 4600:300, 4600:310 and admission to the College of Engineering.
Corequisite: 4600:340. Development of methods to measure temperature, pressure, flow rate, viscosity and motion. Includes both lecture and laboratory experience and emphasizes calibration and accuracy of appropriate instruments.

4600:484 Mechanical Engineering Laboratory (2 Credits)

4600:485 3D Printing and Additive Manufacturing (3 Credits)
Prerequisites: 4600:165, 4600:360, and junior or greater standing or permission. Introduction to 3DPrinting and Additive Manufacturing including various processes, materials, and applications; Hands-on practice and design/manufacturing project; State of the art of 3D Printing.

4600:486 Special Topics: Mechanical Engineering (1-3 Credits)
Prerequisite: Permission. Brief description of current content to be announced in schedule of classes.

4600:497 Honors Project in Mechanical Engineering (4 Credits)
Prerequisite: senior standing in Honors Program. Individual creative project in thermal science, mechanics or design relevant to mechanical engineering, supervised by faculty member of the department.
Gen Ed: Tier 3 - Complex Systems

4600:498 Experimental Investigation in Mechanical Engineering (1-2 Credits)
Individual independent laboratory investigations in areas relevant to mechanical engineering. Student suggests a project and makes appropriate arrangements with faculty for supervision.

Aerospace Systems Engineering (4900)

4900:165 Tools for Aerospace Systems Engineering (2 Credits)
Prerequisite: Permission. Corequisite: 3450:149. Computer applications, spreadsheets, CAD software, MATLAB, and introduction to aerospace engineering program and curriculum; outside speakers; project involving design and construction of small RC aircraft.

4900:166 Aerospace Systems Project Management (1 Credit)
Prerequisite: 4900:165. Teamwork and project planning; semester project involving continuation of design and construction of small RC aircraft in conjunction with SAE Aero Design.

4900:240 Aerospace Systems Engineering I (3 Credits)
Prerequisite: 3450:223. An introductory systems course focusing on systems thinking, systems engineering tools, reliability, life-cycle analysis and statistics.

4900:320 Aerospace Systems Engineering II (3 Credits)
Prerequisites: 4600:340, 4900:240 and admission to the College of Engineering. An extended study of systems topics including linear programming, optimization, decision making, critical path scheduling, and verification.

4900:336 Aerospace Structures (3 Credits)
Prerequisites: 4300:202, 3450:335. Basic theory and methods for analysis and design of aerostructures are covered. Topics include torsion, shear flow, buckling, fracture, and fatigue of beams and plates.

4900:340 Avionics I (3 Credits)
Prerequisites: 4400:307 and admission to the College of Engineering. Electronics for aircraft applications. Amplifiers, filters, regulators, current sources, buffers, sensor and actuator circuits, transmitters, and receivers.

4900:380 Aerospace Materials (3 Credits)
Prerequisites: 3150:151, 3150:152, 4300:202 and admission to the College of Engineering or permission. Theory in science and application of materials for aerospace structures, macroscopic behavior of materials, order and disorder in mechanical behavior, evaluating and quantifying mechanical response.

4900:420 Object Oriented Design & Management (3 Credits)
Prerequisites: 4900:320 and admission to the College of Engineering. An introduction to the area of object-oriented design and management of systems, including abstraction, inheritance, polymorphism, dynamic interactions, hierarchies, patterns, reflection, and distributed objects.

4900:440 Avionics II (3 Credits)
Prerequisites: 4600:412, 4900:340 and admission to the College of Engineering. Communication and control for aircraft applications. Fourier analysis, AM and FM principles, modulators demodulators, communication systems. aircraft system dynamics, classical control system principles and applications.

4900:450 Aerospace Computations (3 Credits)
Prerequisites: 4300:202, 4600:315, 4600:360, 4600:411 and admission to the College of Engineering or permission of instructor. Introduction to finite element and finite volume methods in aerospace engineering; fundamental principles of FEM and FVM discussed and illustrated through structural, and aerodynamic applications.

4900:460 Aerospace Systems Manufacturing (3 Credits)
Prerequisites: 4600:360 or equivalent and admission to the College of Engineering or permission of instructor. Using computer systems to assist in creation, modification, analysis, or optimization of engineering designs, planning, management and control of manufacturing, CAD software with manufacturing applications.

4900:490 Aerospace Design Project (2 Credits)
Prerequisites: Senior standing and admission to the College of Engineering or permission. Detailed senior design project. Design, feasibility and cost analysis, final design and implementation; engine, airframe and aerodynamic testing.
Gen Ed: Tier 3 - Complex Systems

4900:497 Aerospace Honors Project (2 Credits)
Prerequisite: Senior standing in Honors College or permission. Individual creative project in Aerospace Systems, supervised by faculty member of the department. Includes design, feasibility and cost analysis, final design and implementation.
Gen Ed: Tier 3 - Complex Systems
